

**gem5 at home (or
work/school)**

Getting help

gem5 has lots of resources to get help:

1. Documentation at [gem5 doxygen](#)
2. Ways to reachout for help:
 - [Github discussions](#)
 - [gem5 Slack channel](#)
 - Join our mailing lists:
 - gem5-dev@gem5.org : For discussions regarding gem5 development
 - gem5-users@gem5.org : For general discussions about gem5 and its use
 - gem5-announce@gem5.org : For general gem5 announcements
3. [Youtube videos](#)

These links and more information are also available at <https://www.gem5.org/ask-a-question/>

Running gem5 at home

- gem5 performance qualities
 - Single threaded
 - Consumes lots of RAM (if you want to model 32 GB of memory, it needs 32 GB of memory to model it)
 - Can take a lot of time
- Because of this its best to run multiple experiments in parallel
- Recommended hardware:
 - High single thread performance
 - Doesnt need many cores
 - LOTS OF RAM
